

Poonam Chouhan

AI PRODUCT MANAGER

"I turn complex user problems into thoughtful, measurable AI products."

GENERATIVE AI

UX / UI DESIGN

PROMPT ENGINEERING

AGENTIC AI

From Designing Experiences to Building AI Products

CAREER EVOLUTION

"I bring together product thinking, UX understanding, and hands-on Generative AI experience to design AI products that solve meaningful user problems with measurable outcome."

UX Design

Rooted in empathy, deep user research, wireframing, and interaction design.

Product Management

Mastered discovery, PRD writing, roadmapping, and business metrics.

Generative AI

Hands-on prompt engineering, storyboards, multimodal LLMs & visual tools.

AI Product Manager

Combining strategy, UX, evaluation, and AI capability to ship products.

What I Bring to AI Product Teams

CAREER EVOLUTION

Product Thinking

Framing ambiguous market opportunities into scoped, testable MVPs.

Product Discovery

Product Strategy

PRDs

MVP Planning

Roadmapping

Experimentation

AI Understanding

Leveraging state-of-the-art model architectures and evaluation suites.

Generative AI

LLMs

Multimodal AI

Prompt Engineering

FLAGSHIP AI PRODUCT

Empowering Traders with Multimodal Decision Support

TradeLens is an AI-powered trading decision-support product designed to help traders interpret chart screenshots, receive structured trade insights, apply risk guardrails, and maintain a rigorous record of decisions.

ROLE

AI Product Manager

DELIVERABLES

PRD • MVP • Roadmap • Metrics • Interactive Prototype

FOCUS

Strategy, Multimodal AI, Evaluation

[Explore Interactive Prototype](#)

Rahul — Beginner / Intermediate Trader

Target User Segment

KEY USER PAIN POINTS

- **Difficulty Interpreting Technical Charts:** Overwhelmed by complex indicators and patterns.
- **Uncertainty at Entry & Exit:** Struggles to calculate exact Stop Loss and Take Profit levels.
- **Inconsistent Decision-Making:** Influenced by emotional bias and fear of missing out (FOMO).
- **Lack of Structured Feedback:** No objective mentor to validate chart setups before execution.
- **Discipline Deficit:** Fails to log trades systematically to learn from historical mistakes.

THE STRATEGIC OPPORTUNITY

“Can AI act as a decision-support mentor rather than simply generating an automated trade signal?”

By shifting the product vision from a black-box bot to a **transparent AI co-pilot**, we keep the trader accountable while augmenting their vision with structured risk analysis.

TradeLens / Turning Problem into MVP

PRODUCT FLOW & SCOPE

CORE END-TO-END USER JOURNEY

✓ Included in MVP

- **Multimodal Chart Upload:** Instant vision analysis of chart patterns.
- **Structured Output:** Trade Bias (Buy/Sell), Entry, Stop Loss & Take Profit.
- **Confidence Score & Reasoning:** Transparent rationale behind AI recommendations.
- **Risk Guardrails:** Automated alerts if Risk-Reward ratio is under 1:2.
- **One-Click Trade Journaling:** Automatic saving to decision history.

⌚ Out of Scope (Post-MVP)

- **Direct Broker Execution:** Preventing compliance & financial liability issues in V1.
- **Automated High-Frequency Trading:** Focus remains strictly on human decision support.
- **Multi-Asset Derivatives:** Limited to major Forex & Crypto pairs for baseline quality.
- **Social Trading Leaderboards:** Delayed until core AI accuracy metrics stabilize.

TradeLens / AI Quality & Evaluation Framework

MEASUREMENT STRATEGY

5 DIMENSIONS OF AI QUALITY

1. Accuracy

Is the chart pattern & price level detection mathematically correct?

2. Consistency

Does identical visual input yield predictable, reliable outputs?

3. Relevance

Does the response directly address the trader's timeframe & goal?

4. Safety

Are risk guardrails strictly enforced (e.g. mandatory stop-loss)?

5. User Value

Does the insight increase trader win-rate and execution discipline?

NORTH STAR METRIC

Completed Analysis → Outcome Loop Rate

Percentage of uploaded charts where the user accepts/modifies the AI setup and logs the trade outcome. Measures end-to-end product utility.

SUPPORTING METRICS

Activation: AI Acceptance Rate (%)

Engagement: Analysis Frequency / User / Wk

Quality Score: User Feedback Rating (1-5 ★)

Retention: 30-Day Journal Active Users

02 / AI Loan Eligibility Assistant

PRODUCT STRATEGY

Designing AI With Ethical & Governance Guardrails

In financial services, automated decisioning presents severe risks. This product concept focuses on building an AI Loan Eligibility Assistant with built-in fairness, privacy, and explainability.

1. Bias Risk

Preventing demographic discrimination through feature masking.

2. Privacy Risk

Zero data retention on sensitive personal financial records.

3. Explainability

Plain-language rationale for every recommendation generated.

4. Automation Risk

Human loan officer validation required for all rejections.

HUMAN-IN-THE-LOOP (HITL) WORKFLOW

AI Assessment

Evaluates income-to-debt ratios & generates preliminary score.

Explainable Rationale

Produces audit log highlighting primary credit factors.

Human Officer Review

Licensed officer conducts final validation & signs decision.

03 / AI Job Application Agent

Concept Overview: An autonomous agentic workflow designed to reduce job-search fatigue by orchestrating role discovery, JD requirements analysis, profile matching, and draft preparation—with strict human sign-off.

💡Product Thinking & Bottlenecks

Job seekers spend up to 15 hours/week on repetitive application forms. By breaking down the process into deterministic agent sub-tasks, we preserve high accuracy without losing candidate authenticity.

🛡️Responsible Guardrail

The system explicitly forbids fully automated submission without human approval to prevent spamming platforms and ensure alignment with candidate career goals.

Generative AI in Production

HANDS-ON AI WORKFLOWS

PRODUCTION EXPERIENCE AT INTELLIVISION MEDIA

Hands-on application of Generative AI tools to accelerate media production cycles. Focused on prompt iteration pipelines, visual consistency, and creative human-AI collaboration.

- ✓ Concept art & cinematic visual asset pipelines
- ✓ Multi-prompt iteration & style anchor frameworks
- ✓ AI-assisted storyboard automation workflows

Collaboration

Bridging tech & art
teams

"I don't treat UX as decoration. I use it as an essential tool to deeply understand user behavior, structure complex AI feedback loops, and shape intuitive products."

01 / User Research

Qualitative user interviews, problem validation, and mental model mapping.

02 / User Journeys

Mapping friction points, AI touchpoints, and expected confidence thresholds.

03 / Wireframing

Low-fidelity structural layouts focusing on clarity and information hierarchy.

04 / Prototyping

High-fidelity interactive UI mockups to test real-time AI states.

05 / Usability Testing

Observing real users interacting with model outputs to measure trust.

06 / Iteration

Refining interface copy, error handling, and latency feedback spinners.

01

DISCOVER

Identify core human pain points. Determine whether AI is genuinely required or if a simple rule-based system suffices.

02

DEFINE

Formulate metrics, target precision/recall trade-offs, scope constraints, and define success criteria in a structured PRD.

03

DESIGN

Architect user flows, human-in-the-loop interactions, prompt system instructions, and visual feedback mechanisms.

04

BUILD

Partner closely with AI engineering to manage sprint backlogs, test API integrations, and refine model latency.

05

EVALUATE

Benchmark outputs across accuracy, safety, consistency, and user satisfaction metrics before release.

06

ITERATE

Analyze user telemetry, fine-tune prompts, address edge cases, and continuously enhance value delivery.

LET'S BUILD TOGETHER

"Building AI products that are useful, understandable, and responsible."
